## Portland, Oregon

**Whether you are an educator, administrator, healer, clinician, or community activist, these challenging times call for UNITY & CLARITY around supporting families & communities.**

**Join us for a two-day dialogue that shifts the paradigm from pathology to liberation-centered healing, policy, & practice.**

**We will present strategies that promote relational healing & liberation from the oppressive patterns that structure society. We invite participants to engage in dialogue & inquiry about how these ideas can be applied to their lives – and across multiple contexts.**

*Liberation Based Healing practices promote critical consciousness, empowerment, accountability, reconciliation, and healing among individuals, families, and communities. This paradigm of healing departs from traditional mental health and its colonizing practices. As part of a complex mosaic of identity, individuals are seen in relation to their culture, race, gender, and sexual orientation, as well as their social, political and historical contexts.*
